3 APPS · 3 LANGUAGES

PREPARED FOR

Client

DATE

28 Sep 2026

DELIVERY

20 working days

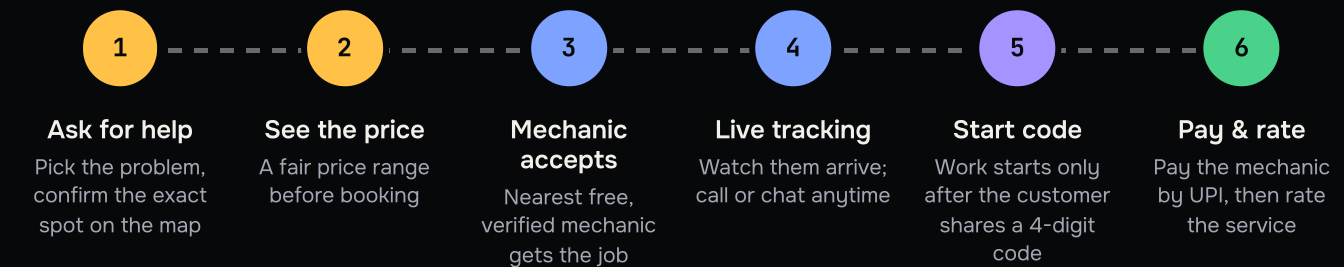

YEAR 1 · ALL-IN

₹30,000

Book a verified mechanic *like you book a cab.*

When a car, bike, scooter or EV breaks down, the customer opens the app, says what's wrong, sees the price upfront, and the nearest verified mechanic comes to them. They track the mechanic live and pay directly by UPI.

HOW ONE BOOKING WORKS

WHAT YOU RECEIVE

Customer app

18

 SCREENS
Android app for people who need help: booking, live tracking, SOS, chat, UPI payment, history.

Mechanic app

9

 SCREENS
Android app for mechanics: registration, go online, accept jobs, navigate, start code, earnings.

Admin panel

6

 SCREENS
Web dashboard for your team: approve mechanics, watch live bookings, set prices, handle complaints.

INCLUDED EVERYWHERE

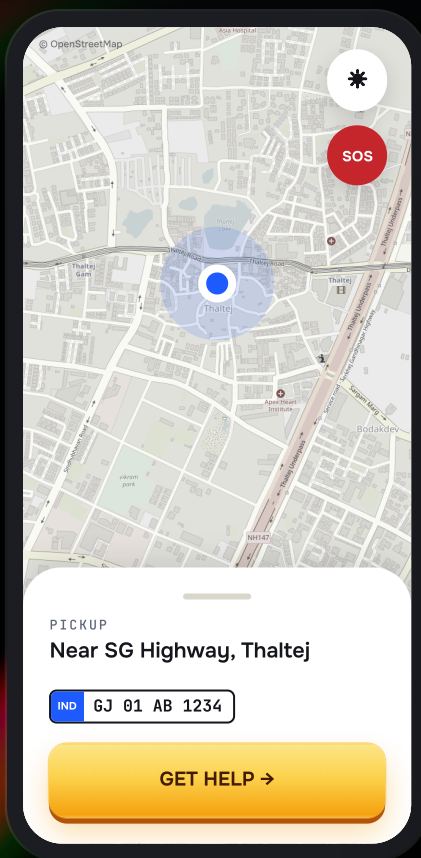

- **3 languages:** English, हिन्दी, ગુજરાતી
- Car, bike, scooter and EV support
- Login with mobile number and OTP
- Push notifications at every step

LAUNCH SCOPE

- Launch cities: Ahmedabad, Ankleshwar, Bharuch (more can be added from the admin panel)
- Platforms: Android + web admin
- Published on Google Play, in your name
- 1 month of free bug fixes after launch

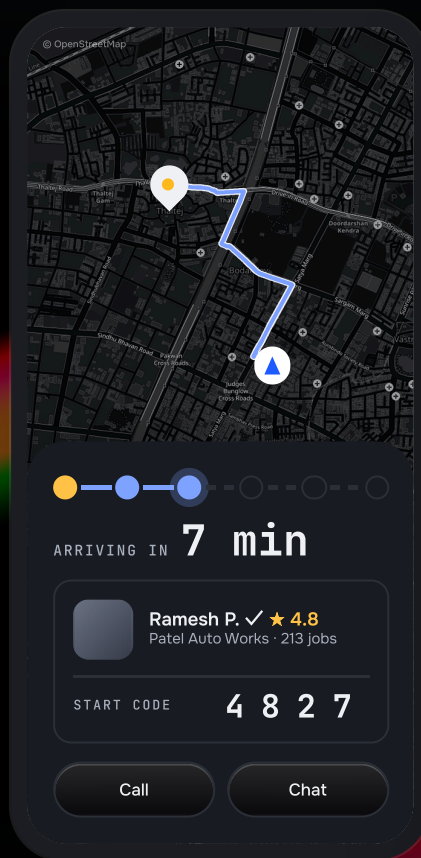

Designed for a *stressful moment* on the road.

Most apps are designed for someone relaxing on a sofa. Ours is designed for someone standing next to a broken vehicle, maybe at night, maybe in harsh sun, with low battery and one free hand. The design system is called **Lane**: calm, clear and readable at a glance, like a highway sign.

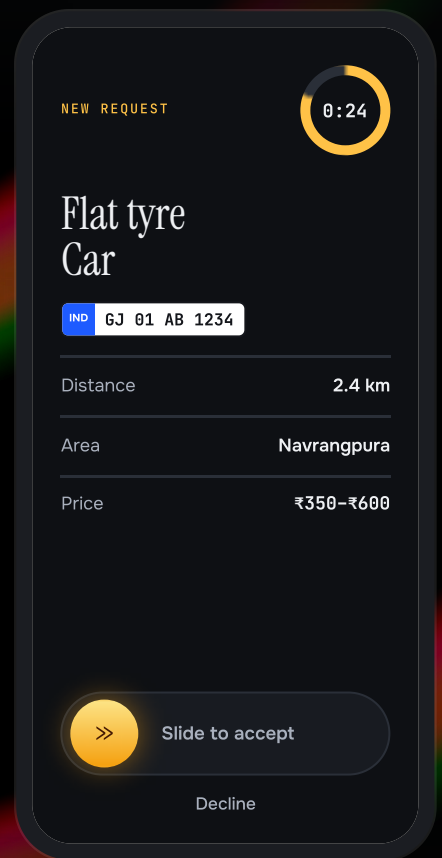

One big button

Everything important sits under your thumb

Always know what's next

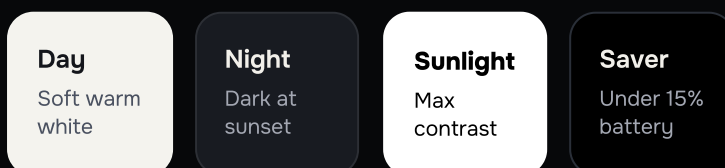

Live status line, ETA, verified ID card

Works with greasy hands

Mechanics slide to accept; no mis-taps

ADAPTS TO THE ROAD AUTOMATICALLY

BUTTON SYSTEM

- **Status colours with meaning:** amber = searching, blue = on the way, violet = working, green = done. **Red only** means danger.

- **Big, clear numbers** for ETA, start code and price, readable from arm's length, in all 3 languages.

Everything included *in the price.*

Customer app

18 SCREENS

Get Help in 3 taps

Pick vehicle → pick problem (picture tiles) → confirm location

Accurate pickup point

GPS accuracy badge, drag-the-map pin, landmark field, Plus Code for roads without addresses

Upfront price range

Shown before booking, set by you from the admin panel

Live tracking

Moving mechanic marker, live ETA, status line, call and in-app chat with photos

Verified mechanic card

Photo, name, rating and a 4-digit start code, so no fake mechanics

Emergency SOS

Hold 1.5 s to alert saved emergency contacts with a live location link, and call 112

Share trip with family

A private live link that expires when the job ends

Works when internet fails

Sends your location by SMS with a map link

UPI payment

Opens any UPI app with the right amount, or scan the QR

Ratings, history, vehicles, profile

Receipts, saved vehicles, up to 3 emergency contacts

Mechanic app

9 SCREENS

Registration & verification

Shop details, photos, ID proof, services and UPI ID, approved by your team

Online / offline in one tap

Today's jobs and earnings on the dashboard

Job offers with a 30 s timer

Problem, distance, area and price; slide to accept

Navigate, arrive, start

Route to the customer, GPS-checked arrival, start code to begin

Finish & get paid

Before/after photos, final amount, confirm UPI payment

Earnings & history

Admin panel

6 SCREENS

Live dashboard

Bookings today, active mechanics, completion rate, arrival times

Mechanic approvals

View documents, approve or block, per city

Live bookings map

Every active job, with filters

Cities & price chart

Turn service areas on or off; price ranges per vehicle, problem and city

Complaints, reviews, settings

Force-update and pause-service switches

Smart dispatch

Each request goes to the nearest free, verified mechanic within 3 km. If nobody accepts in 30 seconds it moves to the next one, then widens the search to 5 km and 10 km automatically.

Built safe from day one, *not patched later.*

Customers share their location and phone number while stranded, so trust is the product. Every protection below is part of the fixed price.

Only genuine apps can connect

Google Play Integrity checks block fake apps and bots from reaching your data or sending OTP spam.

Everyone sees only their own data

Customers can't see other bookings. Mechanics see the exact address only after accepting a job.

No cheating on job status

Arrival checked by GPS, work starts only with the customer's code, prices calculated by the server.

Location privacy

Live location is visible only during the job and auto-deleted within 24 hours; shared trip links expire.

Mechanic ID proofs protected

Stored privately, visible only to your admins. Every admin action is logged.

Abuse & cost protection

OTP SMS limited to Indian numbers, booking limits per user, budget alerts on your cloud bill.

India DPDP Act 2023

Consent screen in 3 languages, right to delete, grievance contact and a data-breach plan.

Google Play policies

Targets Android 16, Data Safety form, in-app + web account deletion, permission disclosures.

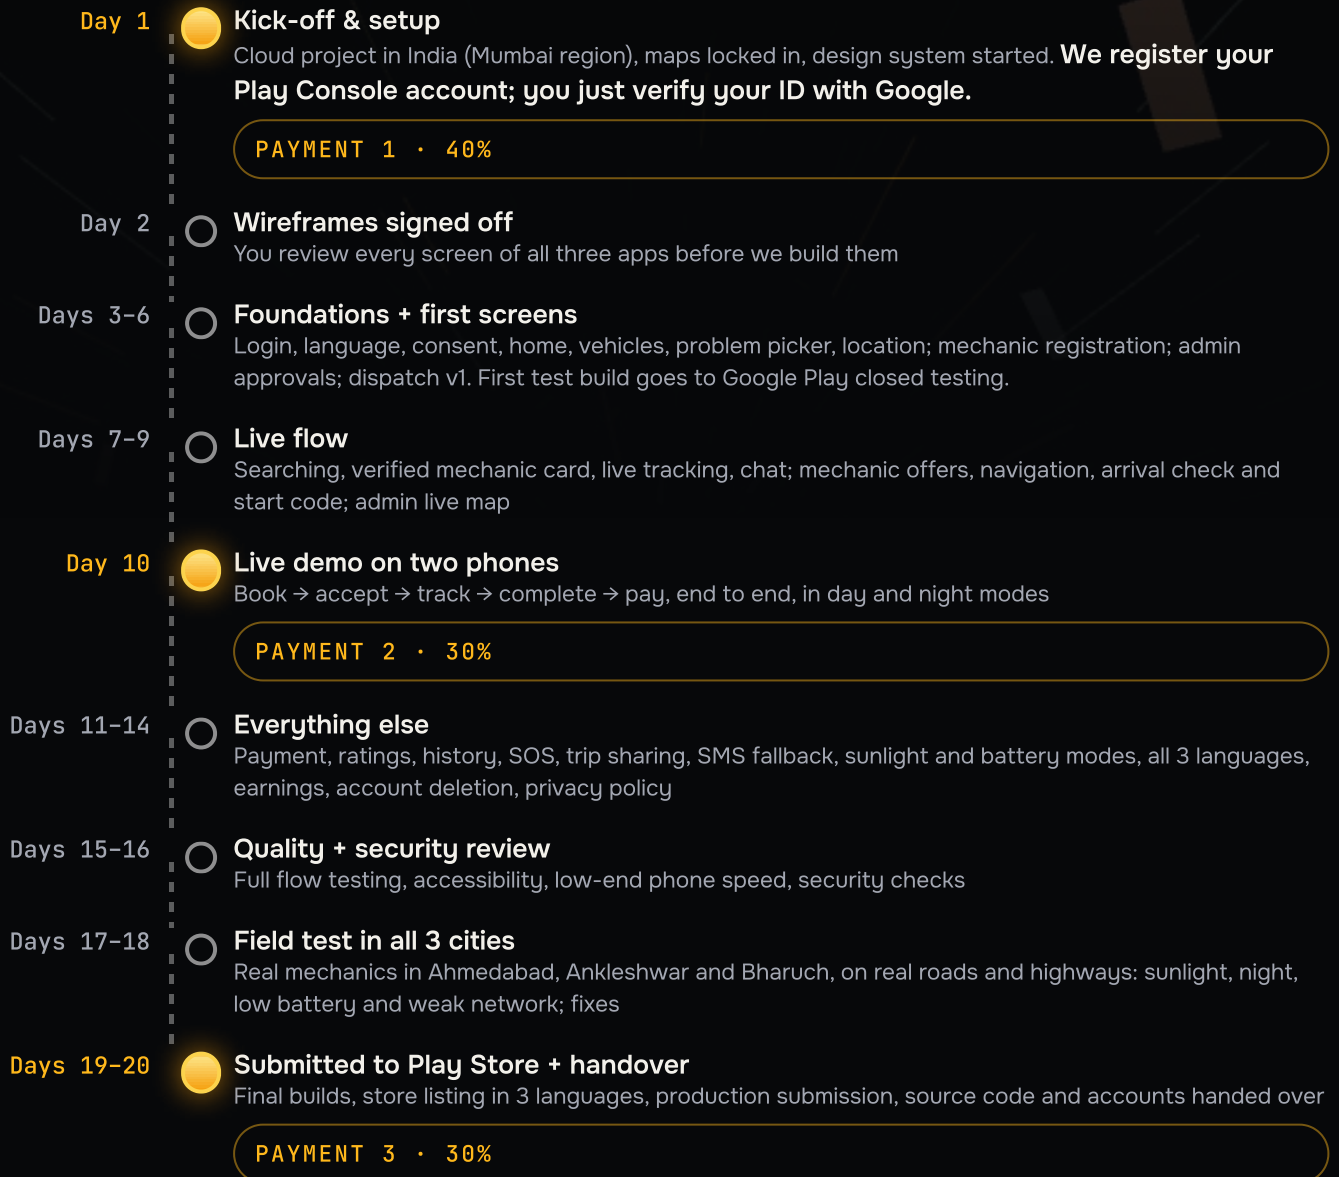

Reliability

Crash reporting, error alerts, backups and an emergency "pause service" switch.

Money never passes through the app: customers pay mechanics directly by UPI, so no bank or card details are ever stored.

20 working days. *Full scope.*

Three developers work in parallel from day 1, so nothing is cut. You see working builds on real phones throughout, and each payment is tied to something you can test yourself.

Google Play timing (Google's rule, not ours): a *new personal* Play Console account must run a closed test with 12 testers for 14 days before public release. We start it on day 6, so production can be requested on day 20, and Google's review usually takes a few more days. A *business* account skips this test but needs a D-U-N-S number, so please choose on day 1.

One price for year one: ₹30,000.

Development of everything in this proposal, **plus** Google Play and Firebase for the first 12 months, set up, paid and managed by us. You pay one amount and get no separate cloud bills in year one.

Customer app 18 screens: booking, live tracking, SOS, trip sharing, chat, UPI payment, history, 3 languages	₹8,500
Mechanic app 9 screens: registration, job offers, navigation, start code, job completion, earnings	₹5,000
Admin panel 6 screens: dashboard, approvals, live bookings map, prices, complaints, settings	₹3,000
Backend & smart dispatch Nearest-mechanic matching, 30 s offers, radius widening, notifications, GPS arrival check, start code	₹4,000
Lane design system & languages Custom look, day / night / sunlight / battery modes, English, Hindi and Gujarati	₹2,000
Security, privacy & Play Store submission Security rules and checks, DPDP consent and deletion, store listing, closed testing, submission	₹2,500
Development subtotal	₹25,000
Year-1 platform package Google Play Console registration + Firebase (database, login OTPs, functions, hosting, storage, notifications) for 12 months, paid and managed by us	₹5,000

Total for year one **₹30,000**

All-inclusive: development + platform for 12 months

40% • DAY 1

₹12,000

On signing, at kick-off

30% • DAY 10

₹9,000

After the two-phone live demo

30% • DAY 20

₹9,000

Play Store submission + handover

INCLUDED IN YEAR ONE

- **1 month** of free bug fixes after launch
- Google Play + Firebase running for 12 months, no bills to you
- Source code and accounts in your name

PHASE 2 (QUOTED SEPARATELY)

- iPhone apps · in-app payments with commission
- WhatsApp booking · AI diagnosis from photos
- Server SOS SMS · masked calling · towing, insurance

Your first year of running costs, *handled.*

The ₹5,000 package covers the Google services the apps need to run for 12 months from launch. We set them up in your name, pay the bills and watch usage, so you get no separate invoices from Google in year one.

Google Play Console account Registered in your name; needed to publish both Android apps.	One time	US\$25 ≈ ₹2,100 ✓ Covered
Firebase: database, functions, hosting, file storage, notifications Pay-as-you-go plan in the Mumbai region. At launch scale most usage fits Google's free daily quotas (50,000 reads and 20,000 writes a day, 2 M function calls a month).	12 months	≈ ₹125 – ₹250/mo ✓ Covered
Login OTP SMS Google charges about ₹6 per OTP sent to India. Logins are remembered on each phone, so most users need only one or two.	Per SMS	≈ ₹6 each ✓ Covered*
Push notifications, crash reports, app security checks, remote settings Firebase Cloud Messaging, Crashlytics, App Check and Remote Config.	–	Free ✓ Included
Maps (Ola Maps) The free tier of 100,000 map events a month covers launch-year traffic.	Monthly	₹0 ✓ Included
Web pages: privacy policy, account deletion, trip-share links Hosted free on Firebase (yourapp.web.app). A custom domain such as a .in name (≈ ₹800–1,200 a year) is optional.	–	₹0 ✓ Included

Year-1 platform package

₹5,000

Paid once as part of the ₹30,000. No cloud bills to you for 12 months.

DEVELOPMENT ₹25,000	+	PLATFORM • 12 MONTHS ₹5,000	=	YOU PAY FOR YEAR ONE ₹30,000
------------------------	---	--------------------------------	---	---------------------------------

***Fair use.** The package is sized for launch-year traffic across the three cities: roughly 300 bookings and a few hundred new logins a month. We check usage every week. If the app grows well beyond that (great news!), we'll tell you first, and nothing extra is ever charged without your written OK.

From year two. Running costs at the same scale are typically ₹7,500–₹15,000 a year, depending mostly on OTP SMS. You can take over the Google billing yourself or renew a yearly package with us; we'll quote it one month before year one ends.

Google and Ola published prices as of September 2026 at \$1 ≈ ₹85. Taxes (GST) extra where applicable.

Simple terms.

1. **Scope.** The features in this proposal, for Android phones and a web admin panel, in English, Hindi and Gujarati, launching in Ahmedabad, Ankleshwar and Bharuch.
2. **Price.** ₹30,000 in total for year one: ₹25,000 development + ₹5,000 platform package, paid 40% / 30% / 30% as on page 7.
3. **Timeline.** 20 working days from the kick-off payment and access to the accounts. Delays in feedback or account access move the dates by the same amount.
4. **Changes.** Small adjustments during development are included. New features or changes after screens are approved are quoted separately before any work starts.
5. **Your inputs.** Feedback within 1 working day during the sprint, the app name and logo approval, a review of the Hindi and Gujarati text, ID verification for the Play Console account (day 1), a grievance contact for the privacy policy, 12 testers for Google's closed test, and 5-10 mechanics per city for the field test.
6. **Accounts & year-1 platform.** The Play Console, Firebase and map accounts are created in your name, so you own them from day one. For the first 12 months we pay and manage their running costs under the ₹5,000 platform package (page 8, fair use applies).
7. **Ownership.** On receipt of the final payment, you own the source code and the app listings.
8. **Support.** One month of free bug fixes after launch. Maintenance and new features are quoted on request.
9. **Validity.** This proposal is valid for 30 days from the date on the cover.
